Dr Gov. Englemann:
St. Louis.

Dear Sir:

If Dr Asa
James Schiel is in the
city of Saint Louis will
you be kind enough to
send him the enclosed note,
the early delivery of which is
of very great importance &
I should not like the liberty
of troubling you with it. I
also write him through the P.O.
but fear he will not call for
it in time.

With much respect,

Dear sir.

Your very obt ser.

MISSOURI BOTANICAL GARDEN
GEORGE ENGELMANN PAPERS

Rec'd May 27

Washington. D.C.
May 22d. 1875.

Dear Doctor;

I wish you would do me the favor to show Dr. Engelmann either the 102 page of my first report (of 1853 work), or the 86 page of the report for 1854 work, and ascertain from him if the printer has not so mixed up the paragraph of which the following is a copy or to make it unintelligible to some extent, to wit:

"Ten observations were made.

Range of Standard Bor. in that period from 29".503 to 29".748 . Range 0".243.

		Variation.
Bunker No 351	= E + 0".006.	Var. from -0".021 to +0".027 = 0".048
.. 496	= E + 0".080.	Var. from +0".046 to +0".109 = 0".063.
Aneroid 7889	= E - 0".015.	Var. .. - 0".055 + 0".035 = 0".090.
.. 9293	= E - 0".025.	Var. .. - 0".005 - 0".045 = 0".040.

E. representing standard Bor."

The portion which I have enclosed with red ink line, as printed, seems to form a part of the error

of instruments, whereas the error of Instrument, as, for example, Bruhns 5 T/= E. +0."006. is taken to be complete.

If this be so, what I wish to understand is the variation which follows — about which I have one opinion which others here have a very different opinion: that is, if the equation as given on this page is complete, what does the variation mean, and from what is it a variation?

Very respt. Yours.

To Dr Engelmann.

Sir: I had written the above note when I was fortunate enough to procure a copy of that part of my report to which it refers, which I send you by to day's mail, and therefore take the liberty of sending you also this letter — begging you to excuse my ignorance & presumption.
